

MCEC Intelligent Lectern

World-class Technology

The Melbourne Convention Centre offers a range of in-built technology that is extraordinarily easy to use.

Every room is fully equipped with screens, sound system, internet access, lighting and an intelligent lectern that gives you total control.

The main feature of the intelligent lectern is a removable, AMX wireless touch-control panel that gives you control of the room environment and all equipment including lighting, projection and volume levels. Touch a button to dim the lights, start a presentation or link to another room – the intelligent lectern will prompt you along the way.

On the other side of this sheet you'll find a guide to using the Intelligent Lectern.

World-class Value

At the MCEC everything has been designed to make your conference cost-effective, stress free and effortless.

You'll have at your disposal a range of intuitive technology and expert support services. For example, our in-house technical team is always available to make all organisers and delegates completely comfortable in using the range of equipment within the centre.

For further information on technical equipment and services please contact our Technology Services Department:
